

Works Management

REJIS

Connecting People and Information

Comprehensive Public Works Application

Works Management is an ASP-WEB (Application Service Provider-WEB) based product that can be used by municipalities to manage their Building Department/Public Works functions, such as tracking violation and code enforcement activities, issuing permits, scheduling inspections, and tracking contractor information.

Benefits & Features

REJIS is a local government agency created to “serve the public interest through delivering quality, cost-effective technology services to the justice community and to government and quasi-government agencies.” REJIS’ primary focus is to provide record management services to law enforcement, courts, and corrections agencies at the local, state and federal levels. This includes interfaces to the Missouri State Highway Patrol’s MULES system, the National Crime Information Center (NCIC), and the NLETS network. REJIS was founded in 1975 under a cooperative agreement between St. Louis County and the City of St. Louis. Our customers are primarily concentrated in the metropolitan St. Louis and southwestern Illinois areas.

REJIS services include:

- Development of custom applications
- Installation and support of custom and commercially available software
- Custom interfaces
- IT Support Service
- Data center outsourcing
- Network, training and help desk support.

REJIS has approximately 140 employees located at three sites. Most of the staff and equipment is based at the REJIS building, in the Central West End of St. Louis.

For additional information on REJIS services, contact your REJIS Client Services Representative or the REJIS Help Desk (314-535-9497 or 1-888-923-7255).

072407

Code Enforcement: Tracks code violations from the time the complaint is received through the inspection process and to the point of final resolution.

Property Management: Maintains property information, including owners and occupants, and can schedule inspections for occupancy.

Permit Management: Easily configurable by the client to allow selection of data elements for each type of permit. In addition, there is a flexible fee structure and inspection scheduling.

Contractor Management: Manages contractor information to ensure building contractors comply with municipal license and certification requirements. Includes permits and related fees.

Inspections: Tracks inspection events (scheduling, activities, results and comments). Clients can download images of violations.

Accounting: Produces cash receipts and basic ledger accounting for violation, contractor and permit payments. If interfaced to the municipality’s core accounting system, duplicate data entry can be minimized saving time and reducing errors.

Interfaces and Reports

- Uploads parcel data from selected county systems (where available)
- Provides a variety of commonly used reports
- Features customizable letter creation for contractor education certification and expiration, inspection scheduling and violation notices, permit certification and expiration, and occupancy certification

Note: A significant discount applies to cities that use IJMS, IMDS, IMDS Plus, or have an IT Support Service contract with REJIS.

Future Enhancements

In future releases, Works Management will accommodate violations cited through the mobile ticketing process and have an interface with the IMDS court system. Works Management will also accommodate hand-held devices, as well as include a Web interface and an Interactive Voice Response (IVR) option for the public.
